

The first signals of easing COVID-19 caseloads emerged during the past month, and improvements are being reflected in the latest government-imposed restrictions. Despite the generally slow-moving reopening plans, recent measures will be a big step for much of Nevada's traditional high-density industries, which have historically been a cornerstone of the state economy and tourism industry. A modest raise in occupancy limits now allows most businesses as well as public gatherings to host 35 percent of their capacity. This number is expected to jump to 50 percent in mid-March if the current infection trajectory is maintained. Additionally, entertainment venues are reopening to the public with a number of properties making the necessary logistical changes to welcome back audiences. Notably, the Vegas Golden Knights have been approved to allow up to 2,600 fans at

T-Mobile Arena starting on March 1. These new practices will assist the leisure and hospitality sector, which has been the most affected industry over the past year. As the COVID-19 vaccination rate continues to rise, the momentum toward larger allowed gatherings is expected to carry further into 2021.

Nevada was initially hit harder than any other state by the pandemic due to the region's relative dependence on travel and tourism, and year-end visitation figures confirm the challenges the industry continues to face. In 2020, Nevada welcomed 23 million visitors, down 53.8 percent compared to the prior year. This was the lowest number in nearly three decades. Moreover, convention attendance, a traditionally large source of spending in Southern Nevada, witnessed an annual decline of 74 percent, falling to 1.7 million from 6.6 million the previous year. Additionally, airport passenger volumes were down 57 percent in 2020 when compared to the prior year. However, the drive-in segment

of the industry was down a more modest 12 percent and remains a critical component to help sustain a baseline of visitation from which future gains can be realized as coronavirus caseloads diminish.

Despite the challenges in the tourism industry, Nevada's housing market reported a year of positives, not unlike other parts of the country. Nationally, the median price for houses sold reached a new peak at \$346,800, growing 2.7 percent from the previous month and closing out the year 6.0 percent higher than in 2019. Nevada mirrored these trends with home prices statewide growing 3.7 percent from the prior quarter. In Southern Nevada, resale home prices in the single-family segment jumped in January to a record-high of \$345,000, a 13.1 percent increase over the year. Price gains have been influenced by record low borrowing costs, dwindling supply, and an influx of new residents, particularly those bringing wealth from higher-priced California markets. Consumers appear to be making lifestyle

choices that include upgraded and/or larger homes, which is further pressing prices north. With regard to new construction homes, similar circumstances remain, but the cost side of the equation also continues to impact top-line values. Elevated land costs, rising construction wages and increased materials costs are all factoring into higher prices.

The public health landscape continues to improve, with most COVID-19 metrics for the state trending downward. Two-week moving averages are falling for both deaths and confirmed cases, and the statewide test positivity rate recently dropped below 10 percent, its lowest point in three months. While the health crisis appears headed in the right direction, underlying economic challenges for some of Nevada’s families and the state and local governments are expected to persist. With a new federal stimulus bill moving through Congress, many Nevada households may receive another round of financial support. The proposed plan includes child tax credits for struggling households, stimulus payments, continued increases in unemployment benefits, a comprehensive vaccination plan, as well as an expansion of the Paycheck Protection Program that targets small businesses. Additionally, the bill would potentially triple the amount of federal aid to Nevada by adding the unemployment rate to the allocation criteria that were previously based exclusively on population. Uncertainty remains on the horizon, but a path to economic recovery appears more achievable than it was nearly a year ago.

appliedanalysis.com

Methodology: Applied Analysis (“AA”) was retained by Nevada State Bank to summarize and analyze a series of key economic indicators on a recurring basis. Relevant data were obtained from AA’s internal databases as well as national, regional and local data providers, including, without limitation, state and local governments. While we have no reason to doubt the accuracy of any of the data reported, we have not performed an audit or assurance procedures on these data, and as such, we cannot attest to their completeness. Generally speaking, data reported are for Nevada, Clark County, Washoe County, or the metropolitan areas therein. Please note that these geographies may differ slightly between data providers.
